PROFILE SUMMARY

Motivated fourth-year Computer Science student with a strong academic foundation and hands-on project experience in software development, cloud computing, and data management. Passionate and eager to use learned technical skills in Python, AWS, and full-stack development to drive innovation and solve real-world challenges

EDUCATION

2022 - 2027

UNIVERSITY OF GUELPH

- Bachelor of Computing Honours

PROFESSIONAL SKILLS

- Problem-Solving
- Adaptability
- Team Collaboration
- Eagerness to Learn
- Ambiguity

TECHNICAL LANGUAGES

- Python
- Flutter
- JavaScript
- AWS (S3, DynamoDB)
- Typescript
- HTML / CSS

PROJECTS

TextExtraction, September 2025

- Built a serverless AWS pipeline using S3 for file storage, Lambda (Python) for serverless processing, Textract for OCR-based text extraction, and DynamoDB for structured data storage, enabling automated note management.
- Implemented event-driven workflows by configuring S3 triggers for Lambda functions and designing DynamoDB schemas with partition/sort keys and Local Secondary Indexes (LSIs) to optimize query performance.
- Developed error handling and logging in Python for Lambda functions, integrating CloudWatch for monitoring and debugging file processing, permissions, and Textract extraction failures.

ProJobTracker, April 2025

- Built a cross-platform Flutter job application tracker supporting Android, ios, web, windows, macos, and linux with SQLite persistence and Github Actions CI/CD deployment to Github Pages.
- Implemented custom authentication with SHA-256 password hashing and persistent session management, along with full CRUD operations for job applications including date validation, duplicate detection, and status-based filtering.
- Developed interactive analytics dashboard using fl_chart featuring status distribution pie charts, position breakdowns, and average salary bar charts, plus a calendar view with deadline markers for tracking application timeliness.

Educational Facilities Landscape, April of 2026

- Built a full-stack geospatial visualization platform using React 19 + Typescript, Spring Boot 3.3, and MariaDB, featuring interactive Leaflet maps with clustering, radius-based search, and Recharts analytics for ~19k Canadian educational facility records.
- Designed and containerized a multi-service data pipeline - a Python ETL script that ingests, normalizes, and deduplicates Statistics Canada's ODEF dataset, orchestrated via Docker Compose with a Spring Boot REST API, React Frontend, and MariaDB across 4 coordinated containers.
- Implemented CI/CD with quality gates via Github Actions - automated ESLint, Checkstyle, SpotBugs static analysis, JUnit/Jacoco test coverage, and Github Pages deployment for the frontend on every push to main.
